

NORTH COAST LIMITED EDITION RED IPA

Official NORTHERN BREWER Instructional Document

Deep ruby with a stunning hop profile, North Coast is a home-grown red IPA that bridges the brewing gap between the Great Lakes and the Pacific Ocean. Brilliant notes of citrus fruit and herbals arise from artisanal-grown hops of Michigan's Hop Head Farms. Exclusive Superstructure IPA syrup from barley malted in the heart of Wisconsin adds caramel and raisin flavors between complex layers of nutty, slightly sweet base malt. Wyeast Limited Edition West Coast IPA yeast finishes clean to support the intense-yet-balanced hop bill—fusing grapefruit, woody spice and tropical florals in a lush expanse of aroma and crisp, fresh flavor. Backed by substantial ABV, medium body and full mouthfeel, North Coast spans styles for a crowd-pleasing, pioneering pint.

O.G.: 1.072 READY: 6 WEEKS

2 weeks primary, 2-4 weeks secondary,
2 weeks bottle conditioning

KIT INVENTORY:

MAILLARD MALTS™ SPECIALTY GRAIN

- 0.5 lbs Briess Caramel 40
- 0.5 lbs English Medium Crystal
- 0.25 lbs English Extra Dark Crystal
- 0.25 lbs Special B

MAILLARD MALTS™ EXTRACTS & OTHER FERMENTABLES

- 6.3 lbs Superstructure malt syrup (60 min)
- 3.15 lbs Superstructure malt syrup (15 min late addition)
- 1 lb Corn sugar (15 min late addition)

HOPTIMUS REX™ PREMIUM HOPS & OTHER FLAVORINGS

- 1 oz Hop Head Farms Magnum (60 min)
- 1 oz Hop Head Farms Nugget (30 min)
- 1 oz Hop Head Farms Glacier (10 min)
- 1 oz Hop Head Farms Cascade (5 min)
- 1 oz Hop Head Farms Chinook (5 min)

DRY HOPS

- 1 oz Hop Head Farms Cascade
- 1 oz Hop Head Farms Glacier
- 1 oz Hop Head Farms Magnum

YEAST

- Wyeast 1217-PC West Coast IPA. Optimum temp: 62-74°F

PRIMING SUGAR

- 5 oz Priming Sugar (save for Bottling Day)

BEFORE YOU BEGIN ...

MINIMUM REQUIREMENTS

- Homebrewing starter kit for brewing 5 gallon batches
- Boiling kettle of at least 3.5 gallons capacity
- Approximately two cases of either 12 oz or 22 oz pry-off style beer bottles

UNPACK THE KIT

- Refrigerate the yeast upon arrival
- Locate the Kit Inventory (above) - this is the recipe for your beer, so keep it handy
- Doublecheck the box contents vs. the Kit Inventory
- Contact us immediately if you have any questions or concerns!

PROCEDURE

A FEW DAYS BEFORE BREWING DAY

1. Remove the liquid Wyeast pack from the refrigerator, and “smack” as shown on the back of the yeast package. Leave it in a warm place (70-80° F) to incubate until the pack begins to inflate. Allow at least 3 hours for inflation; some packs may take up to several days to show inflation. Do not brew with inactive yeast—we can replace the yeast, but not a batch that fails to ferment properly.

ON BREWING DAY

2. Collect and heat 2.5 gallons of water.
3. For mail-order customers grains for extract kits come crushed by default, but if you requested uncrushed grains, crush them now. Pour crushed grain into supplied mesh bag and tie the open end in a knot. Steep for 20 minutes or until water reaches 170°F. Remove bag and discard.
4. Bring to a boil. Remove the kettle from the burner and stir in 6.3 lbs Superstructure malt syrup.
5. Return wort to boil. The mixture is now called “wort”, the brewer's term for unfermented beer.
 - Add 1 oz Magnum hops and boil for 60 minutes.
 - Add 1 oz Nugget hops 30 minutes before the end of the boil.
 - Add the remaining 3.15 lbs Superstructure malt syrup and 1 lb corn sugar 15 min before the end of the boil.
 - Add 1 oz Glacier 10 minutes before the end of the boil.
 - Add 1 oz Chinook and 1 oz Cascade 5 minutes before the end of the boil.
6. Cool the wort. When the 60-minute boil is finished, cool the wort to approximately 100° F as rapidly as possible. Use a wort chiller, or put the kettle in an ice bath in your sink.
7. Sanitize fermenting equipment and yeast pack. While the wort cools, sanitize the fermenting equipment - fermenter, lid or stopper, fermentation lock, funnel, etc - along with the yeast pack and a pair of scissors.
8. Fill primary fermenter with 2 gallons of cold water, then pour in the cooled wort. Leave any thick sludge in the bottom of the kettle.
9. Add more cold water as needed to bring the volume to 5 gallons.

10. Aerate the wort. Seal the fermenter and rock back and forth to splash for a few minutes, or use an aeration system and diffusion stone.

11. Optional: if you have our Mad Brewer Upgrade or Gravity Testing kits, measure specific gravity of the wort with a hydrometer and record.

12. Add yeast once the temperature of the wort is 78°F or lower (not warm to the touch). Use the sanitized scissors to cut off a corner of the yeast pack, and carefully pour the yeast into the primary fermenter.

13. Seal the fermenter. Add approximately 1 tablespoon of water to the sanitized fermentation lock. Insert the lock into rubber stopper or lid, and seal the fermenter.

14. Move the fermenter to a warm, dark, quiet spot until fermentation begins.

BEYOND BREWING DAY, WEEKS 1–2

15. Active fermentation begins. Within approximately 48 hours of Brewing Day, active fermentation will begin—there will be a cap of foam on the surface of the beer, and you may see bubbles come through the fermentation lock.

16. Active fermentation ends. Approximately 1-2 weeks after brewing day, active fermentation will end: the cap of foam falls back into the new beer, bubbling in the fermentation lock slows down or stops.

17. Transfer beer to secondary fermenter. Sanitize siphoning equipment and an airlock and carboy bung or stopper. Siphon the beer from the primary fermenter into the secondary.

BEYOND BREWING DAY— SECONDARY FERMENTATION

18. Secondary fermentation. Allow the beer to condition in the secondary fermenter for 2-4 weeks before proceeding with the next step. Timing now is somewhat flexible.

19. Add the dry hops. Add 1 oz Cascade, 1 oz Glacier, and 1 oz Magnum hops to the secondary fermenter. Dry hop for 5-7 days total.

BOTTLING DAY—ABOUT 4 WEEKS AFTER BREWING DAY

20. Sanitize siphoning and bottling equipment.

21. Mix a priming solution (a measured amount of sugar dissolved in water to carbonate the bottled beer) of $\frac{2}{3}$ cup priming sugar in 16 oz water. Bring the solution to a boil and pour into the bottling bucket.

22. Siphon beer into bottling bucket and mix with priming solution. Stir gently to mix—don't splash.

23. Fill and cap bottles.

2 WEEKS AFTER BOTTLING DAY

24. Condition bottles at room temperature for 2 weeks. After this point, the bottles can be stored cool or cold.

25. Serving. Pour into a clean glass, being careful to leave the layer of sediment at the bottom of the bottle. Cheers!
