

# WICKETT HOP ALE

Official NORTHERN BREWER Instructional Document

Love him or hate him, Mike Wickett always has you coming back for more. The Wickett Hop Ale will do the same. This classic cream ale has a smooth delivery from the bright pilsner malt with honey sweetness screaming into the hop aroma from the citrusy Mosaic hops. This beer promises a clean and crisp finish. Pairs perfectly with any sporting event or while enjoying the Chuck and Wickett show. Give it a try, we're sure you'll agree that not much is better than The Wickett Hop.

**O.G.: 1.043 READY: 4 WEEKS**

2 weeks primary, 2 weeks bottle conditioning

## KIT INVENTORY:

### MAILLARD MALTS™ SPECIALTY GRAIN

- 0.75 lbs Gambrinus Honey Malt
- 0.25 lbs Belgian Biscuit

### MAILLARD MALTS™ EXTRACTS & OTHER FERMENTABLES

- 6 lbs Pilsen malt syrup

### HOPTIMUS REX™ PREMIUM HOPS & OTHER FLAVORINGS

- 1 oz Mosaic (60 min)
- 1 oz Mosaic (0 min)

## YEAST

- Safale US-05 Ale Yeast. Optimum temp: 59°-75° F
- Wyeast American Ale 1056. Optimum temp: 60°-72° F
- White Labs WLP001 California Ale. Optimum temp: 68°-73° F

## PRIMING SUGAR

- 5 oz Priming Sugar (save for Bottling Day)

These simple instructions are basic brewing procedures for this Northern Brewer extract beer kit; please refer to your starter kit instructions for specific instructions on use of equipment and common procedures such as siphoning, sanitizing, bottling, etc.

For more detailed extract brewing instructions, please visit [www.northernbrewer.com](http://www.northernbrewer.com)

## BEFORE YOU BEGIN ...

### MINIMUM REQUIREMENTS

- Homebrewing starter kit for brewing 5 gallon batches
- Boiling kettle of at least 3.5 gallons capacity
- Approximately two cases of either 12 oz or 22 oz pry-off style beer bottles

### UNPACK THE KIT

- Refrigerate the yeast upon arrival
- Locate the Kit Inventory (above) - this is the recipe for your beer, so keep it handy
- Doublecheck the box contents vs. the Kit Inventory
- Contact us immediately if you have any questions or concerns!

## PROCEDURE

### ON BREWING DAY

1. Collect and heat 2.5 gallons of water.
2. Pour crushed grain into supplied mesh bag and tie the open end in a knot. Steep for 20 minutes or until water reaches 170°F. Remove bag and discard.
3. Bring to a boil and add the 6 lbs Pilsen malt syrup. Remove the kettle from the burner and stir in the Pilsen malt syrup.
4. Return wort to boil. The mixture is now called "wort", the brewer's term for unfermented beer.
  - Add 1 oz Mosaic hops and boil for 60 minutes.
  - Add 1 oz Mosaic hops at the end of the 60 minute boil and turn off the heat.
5. Cool the wort. When the 60-minute boil is finished, cool the wort to approximately 100° F as rapidly as possible. Use a wort chiller, or put the kettle in an ice bath in your sink.
6. Sanitize fermenting equipment and yeast pack. While the wort cools, sanitize the fermenting equipment - fermenter, lid or stopper, fermentation lock, funnel, etc - along with the yeast pack and a pair of scissors.
7. Fill primary fermenter with 2 gallons of cold water, then pour in the cooled wort. Leave any thick sludge in the bottom of the kettle.
8. Add more cold water as needed to bring the volume to 5 gallons.

9. Aerate the wort. Seal the fermenter and rock back and forth to splash for a few minutes, or use an aeration system and diffusion stone.

10. **OPTIONAL:** if you have our Mad Brewer Upgrade or Gravity Testing kits, measure specific gravity of the wort with a hydrometer and record.

11. Add yeast once the temperature of the wort is 78°F or lower (not warm to the touch). Use the sanitized scissors to cut off a corner of the yeast pack, and carefully pour the yeast into the primary fermenter.

12. Seal the fermenter. Add approximately 1 tablespoon of water to the sanitized fermentation lock. Insert the lock into rubber stopper or lid, and seal the fermenter.

13. Move the fermenter to a warm, dark, quiet spot until fermentation begins.

### BEYOND BREWING DAY, WEEKS 1-2

14. Active fermentation begins. Within approximately 48 hours of Brewing Day, active fermentation will begin - there will be a cap of foam on the surface of the beer, and you may see bubbles come through the fermentation lock.

15. Active fermentation ends. Approximately 1-2 weeks after brewing day, active fermentation will end: the cap of foam falls back into the new beer, bubbling in the fermentation lock slows down or stops.

### BOTTLING DAY—ABOUT 2 WEEKS AFTER BREWING DAY

16. Sanitize siphoning and bottling equipment.

17. Mix a priming solution (a measured amount of sugar dissolved in water to carbonate the bottled beer) of  $\frac{2}{3}$  cup priming sugar in 16 oz water. Bring the solution to a boil and pour into the bottling bucket.

18. Siphon beer into bottling bucket and mix with priming solution. Stir gently to mix—don't splash.

19. Fill and cap bottles.

### 2 WEEKS AFTER BOTTLING DAY

20. Condition bottles at room temperature for 2 weeks. After this point, the bottles can be stored cool or cold.

21. Serving. Pour into a clean glass, being careful to leave the layer of sediment at the bottom of the bottle. Cheers!
